

Organic Seed Resources

The following is our current list of organic seed resources. If anyone knows of other companies, individuals or directories that we should add, please let us know. Anyone seeking an exemption from the organic seed requirement should (at least) check the resources on this list.

Please note that you do NOT have to purchase organic seed IF it is not commercially available in appropriate form, quality, quantity or variety to fit your Organic Production System Plan. For instance, you do not have to buy organic wheat seed in 1 oz. packets to plant 500 acres if that is the only quantity in which it is available. You do not have to buy organic sprouting alfalfa seed for your hay field if that is the only form in which it is available. You do not have to buy dirty, low-germination or non-certified organic seeds if that is the only quality available. Whatever the reason for not using organic seed, you (the producer) must document what the reason(s) are and that you did search for organic seed before using non-organic. I hope this is helpful. Please contact us if you have any further questions.
